Recommender web app

App URL: jmb-boardgame-recommender.herokuapp.com

Python code on Bokeh server, hosted on Heroku.

Tabbed dashboard style: Simple and Advanced game search tabs.

Simple Game Recommender:

- User enters up to eight game titles they like, and clicks “Recommend”.
- App does nearest neighbor search to each liked game.
- Randomly selects five games from most common neighbors.
- Presents recommended in list with game box thumbnail, title, an info link and Amazon buy link.

Future work

- Try different recommender models
- Port to “real” web server (Flask) with analytics
- Advertise to Boardgamegeek community
- Run some A/B testing with different models
